Workforce Trends

Population

Clark County is the least populated county in the state with less than one person per square mile. In 2000, population peaked at just over one thousand, but has since struggled to maintain that level. After falling to below 900 people in 2003 the county began to see moderate population growth. From 2003 to 2008 the county's population increased to 980, growing 6 percent in five years.

Population in the county began to fall towards the end of 2009 after Idahoan Foods closed down a potato processing plant. The plant was the county's largest employer and had supported 128 jobs—roughly 23 percent of the county's workforce. In 2016, the county's population dropped to 860.

Labor Force & Employment

With a small labor force and population, unemployment rates can fluctuate significantly. The 2016 unemployment rate at 3.4 percent remained below state and national levels. Unemployment in the agriculturally dependent county spiked from 2001 to 2005 because of water shortages. The county experienced a steady decline in its labor force from 1998 to 2002 before it began slowly rebounding. The population is aging as younger people are drawn away by urban education and employment.

Farming is the largest industry. Over 66 percent of the land is owned by the federal government and another 7 percent by the state. The majority is considered rangeland, and sheep are a major commodity. The U.S. Department of Agriculture operates a research faculty, which studies and develops new breeds of sheep. Among the other industrial sectors, government provides the most jobs at 46 percent. Trade, transportation and utilities is

the second largest sector, employing 23 percent of workers. Efforts by economic development and county officials are underway to develop an energy park within the county.

The county is located on the Montana border and includes part of the Continental Divide. The city of Dubois is virtually the last place of refuge when winter storms intermittently cause closure of Interstate 15.

Nonfarm Payroll Jobs for 2016

Covered Employment & Wages

Covered employment decreased 17 percent 2005 and 2015. Average wages increased \$13,893, or 54 percent, during the decade. Between 2014 and 2015 wages decreased in only the government sector. Financial Activities saw the largest wage growth at 25 percent. The closure of the potato processing plant has had a dramatic impact on the county's employment and wages. It should be noted that these wages are counted where the job is located.

Covered employment includes jobs subject to state and federal unemployment insurance laws. These laws apply to approximately 92 percent of Idaho's employees.
